WHAT MAKES GMB EFFECTIVE

Protocol GMB specifically acts to increase the rate of repair by decreasing the body's natural inflammatory responses, thus improving or maintaining the integrity of connective tissue structures such as cartilages, ligaments and joint synovial lubricating fluids. But that's not all.

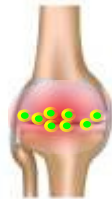

WHY YOUR JOINTS SELF-DESTRUCT

As your joints suffer prolonged damage, they become more inflamed and your immune system steps up its attack. So begins a downward spiral of joint destruction and pain.

Normally the injury heals and the inflammation goes away. However, if the irritation continues, so does the inflammation!

With continued body inflammation response, your immune system senses danger and starts attacking what it thinks are invading germs. Thus, your joint cartilage takes a beating from your own system creating the start of osteoarthritis.

Once you Stop Joint Destruction, 3 things fall into place:

1

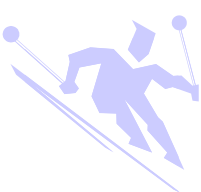

You soon feel less pain because the attacks on your joints have stopped.

2

Your joints stop degrading. Unless you find a way to stop joint cartilage attacks, the damage keeps getting worse. Protocol GMB works to halt this progressive destruction.

3

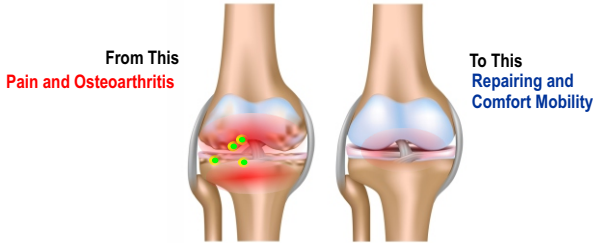

Your joints go into repair mode. Restoring your ease of movement and flexibility.

EFFECTIVE, SO YOU CAN BE ACTIVE

You may experience improved flexibility in all of your joints and freedom from lingering soreness that will have you telling your friends, just like the friend or relative has told you about Protocol GMB.

There is a reason our customers stay with us and some for more than 10 years. Up to 90% of our customers receive the following benefits after 4 weeks showing significant improvements to knees, hands, shoulders, feet, back and hips.

- ✓ Joint swelling — DOWN
- ✓ Tenderness and pain — DOWN
- ✓ Overall achiness — DOWN
- ✓ Mobility — IMPROVED

Product Content:

Glucosamine Hydrochloride (promote cartilage and joint fluid)

MSM (bio-available form of sulfur for cellular rebuilding, anti-inflammatory, detoxant)

Glycine (amino acid with unique detoxification properties, mood stabilizing allowing the brain to reach REM sleep)

Vitamin C (calcium ascorbate - also called buffered/ester vitamin C, super antioxidant and an aid for absorption of other ingredients)

Calcium (calcium ascorbate - essential in the synthesis of certain connective tissue structures such as collagen and glycosaminoglycan)

Possible Contraindications: may interact with the anticoagulant (blood-thinning) drug warfarin (Coumadin). Overall, studies have not shown any other serious side effects. If headaches or loose stool occur, recommended to reduce dosage by half for 2 weeks and slowly increase. Always consult with your doctor before starting a new supplement or drug.
